- PCR -

TEST	RESULT	FLAG	REFERENCE	UNIT
------	--------	------	-----------	------

SARS-nCoV-19 PCR Not Detected

GENERAL COMMENTS:

1. All results must be interpreted by a clinician or authorized health care professional with due consideration of contact exposure, clinical presentation and patient outcomes.
2. Due to the nature of the test, sample collection, storage and transportation will have an impact on the result.
3. The test is a molecular-based assay (PCR). False positives and negatives may occur for various reasons.
4. All test results are forwarded to the designated public health authorities in accordance with statutory provisions and governmental reporting protocols.

Interpretation of a NEGATIVE result: (Reported as not detected)

A NEGATIVE result means that SARS-CoV-2 (COVID-19) was not detected. Negative results do not necessarily exclude infection with SARS-CoV-2 (COVID-19) and should not be the sole basis of a patient management decision. Retesting is advised if clinically indicated.

Interpretation of a POSITIVE result: (Reported as detected)

A POSITIVE result indicates the presence of SARS- CoV-2 (COVID-19). Patients are advised to contact their doctor immediately for clinical guidance and management. Self-isolation is necessary for at least 14 days unless hospitalization is required. It is further recommended that all close contacts also undergo testing for SARS-CoV-2 (COVID-19).

Interpretation of an INDETERMINATE result: (Reported as inconclusive)
Please contact the laboratory immediately.
